mm working inner diameter mold used to form the expanded tubing, to prevent a direct contact of the expanded tubing with the heat or the metal of the balloon mold. The larger second balloon mold is used to produce uniform heating of the expanded tubing during heat treatment. The expanded tubing is preferably heated at about 160°C to about 280°C, for about 5 seconds to about 120 seconds in the second balloon mold. As a result, the expanded tubing shrinks to, or nearly to, the original first outer diameter of the extruded tubing. Specifically, the expanded tubing outer diameter is reduced to about 120% to about 80% of the tubing first outer diameter. The expanded tubing is preferably axially stretched during the heat treatment, however, in alternative embodiments no axial tension is applied during the heat treatment. The expanded tubing is preferably at atmospheric pressure and thus not expanded during the heat treatment, to allow the expanded tubing to heat shrink.

Unlike typical balloon materials in which the length of the expanded tubing will lengthen as the outer diameter of the expanded tubing is reduced during the heat shrinking thereof, the axial length of the polyester copolymer expanded tubing has little axial lengthening during the heat treatment. Specifically, the expanded tubing has an axial lengthening during the reduction of the outer diameter thereof of no more than about 10% to about 25% of the original length of the expanded tubing. In one embodiment, tubing having an outer diameter of about 0.032 inch (0.81
